

6 Reasons Why Commercial Flights are safe

1. Safety facts prove flying IS NOT dangerous.

The goal is for you to feel safe when you fly. WeFly is committed to putting your needs first and providing you a comfortable and safe atmosphere to enjoy your flight.

2. Accidental deaths per year by cause comparison.

ONE TRIP AROUND THE SUN

U.S. Airline Flight Accidents
100

Auto Accidents
46,000

3. 7 Decades later - only 28 crashes

Pilot error is the number one cause of plane crashes. The U.S. airline industry has only had 28 in the last 70 years.

4. What if I fly every day?

If you fly everyday of your life it would take

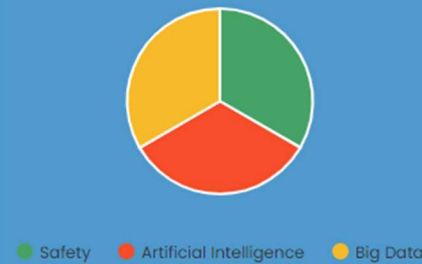

19,000 Years

before a fatal airline accident would happen

5. WeFly is committed to you.

At WeFly we make safety a top priority for our customers. We make improvements to safety EVERY DAY. WeFly is committed to using Big Data and AI technology to keep us on the cutting edge of safety in the industry.

6. Have you ever been stung by a bee?

You are more likely to die from a bee sting than a U.S. Airline Flight.

Bee Sting
1 in 5.5 Million

Airline Flight
1 in 7 Million
